#### **DETAILED ACTION**

### Drawings

1. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because applicant has amended the drawings in a preliminary amendment but has not enclosed the corrected drawings. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

## Claim Objection

2. Claim 5 is objected to because of the following informalities: The period in line 3 is improper. Appropriate correction is required.

#### Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1 3, 5 7, 9 10, 12 13, and 17 18 are rejected under 35 U.S.C.
   103(a) as being unpatentable over U.S. patent 6,389,028 to Bondarenko et al in view of U.S. patent application US 2003/0108187 to Brown et al.

With regard to claim 1, Bondarenko et al teach receiving a service request from a terminal (col 7 line 20; see also fig 2), receiving status information from a plurality of

Application/Control Number: 10/032,027

Art Unit: 2661

service providers (col 8 lines 9+) wherein this status information comprises queue information from these service providers regarding position in the queue for the respective user terminal (see col 7 lines 63+). Bondarenko et al does not, however, teach responsive to this queue (status) information, calculating a queue result for each of these providers.

Brown teaches using subscriber information to calculate the queue position. See par 90.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have calculated a queue result (ie, position in the queue) for each of the service providers of Bondarenko et al based on the subscriber information (ie, history) of the users, in light of the teachings of Brown et al, in order to more accurately optimize the system resources of the call center to the plurality of its users.

With regard to claim 2, see par 43 and 48 of Brown where callee authentication is taught.

With regard to claim 3, queue attribute (depth) is taught above; further, queue factor (services in use, and historical averages for hold times) used to calculate current wait times are discussed in par 89 and 90 of Brown.

With regard to claim 5, col 8 line 9 of Bondarenko et al discusses choosing the service provider.

With regard to claim 6, col 7 line 63 discusses placing a request in the queue.

With regard to claim 7, see the discussion above and note that col 8 lines 30+ discuss sharing the multiple formats of data.

With regard to claim 9, see the rejection of claim 1 above, and further note the following: SW 30 (col 7 lines 20+) corresponds to the communication module adapted to receive service requests from the terminals; a queuing module is described in col 7 lines 36+ (IP queuing module), and the queuing results module is discussed in col 7 lines 35+ as being SW 30. While SW is not a separate module from the communication module, the examiner notes that there is a separate, corresponding "queuing results module" taught in Brown et al in paragraph 90, data storage system 62, wherein it would have been obvious to one of ordinary skill in the art at the time of the invention to have used separate units in order to make the system easier to implement and service.

With regard to claim 10, see par 89 – 90 where "controller 60 calculates historical averages for call hold queue 70". See also database 2 which maintains information regarding call hold queue 70.

With regard to claims 12 - 13, the callee is identified in par 43 of Brown.

With regard to claim 17, see the interface in figure 2 of Bondarendo et al.

With regard to claim 18, E-mail and other such types of options are listed in col 8 lines 8+.

5. Claims 8, 14, and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,389,028 to Bondarenko et al in view of U.S. patent application US 2003/0108187 to Brown et al as applied above to claims 1 - 3, 5 - 7, 9 - 10, 12 - 13, and 17 - 18, and further in view of U.S. patent 6,498,845 to Martz et al.

Art Unit: 2661

With regard to each of these claims, Bondarenko et al/Brown teach the invention as described above, but do not teach assigning a tracking number to the service request, or a module for carrying this process out.

Martz teaches assigning service numbers to call information so that the type of service provided can be identified. See col 3 lines 36+. The means for doing this (ie, the module) is described as being control computer 14.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have provided Bondarenko et al/Brown with a method/means for assigning a tracking number to the service request, in light of the teachings of Martz et al, in order to be able to keep track of which type of service is being presented to the terminal in an effective manner.

6. Claims 4, 11, and 19 - 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,389,028 to Bondarenko et al in view of U.S. patent application US 2003/0108187 to Brown et al as applied above to claims 1 – 3, 5 – 7, 9 – 10, 12 – 13, and 17 - 18, and further in view of U.S. patent 6,493,695 to Pickering et al.

With regard to claim 4, Bondarenko et al/Brown et al teach the invention as described above, but do not teach the use of a business judgment rule to quantify customer information data. This is taught in Pickering et al in col 9 lines 24+ (see gold, silver, etc. description). It would have been obvious to one of ordinary skill in the art at the time of the invention to have provided Bondarenko et al / Brown et al with a business judgment rule in light of the teachings of Pickering et al in order to help determine the required call times for each of the individual users.

With regard to claim 11, note the use of routing module 216 which acts as both the costing module and further note that customer data of a historical nature is collected, as described in col 10 lines 15+.

With regard to claim 19, the SW in Bondarenko et al discussed above receives service requests from terminals (see figure 1) and relaying the data on the availability of service providers as discussed above and shown in figure 2; and also a means for determining caller id in Bondarenko et al as is discussed above; the queuing result, attribute, and factor means of Brown are discussed above, and note the customer relationship database 202D shown in figure 2 (202D, etc) of Pickering.

With regard to claim 20, Bondarenko et al/Brown et al manage the plurality of queues as discussed above.

7. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,389,028 to Bondarenko et al in view of U.S. patent application US 2003/0108187 to Brown et al and U.S. patent 6,493,695 to Pickering et al as applied to claim 20 above, and further in view of U.S. patent 6,498,845 to Martz et al.

Bondarenko et al/Brown et al/Pickering et al teach the invention as described above with respect to claim 20, but do not teach a means for tracking customer information. This is taught in Martz et al. See the discussion above. It would have been obvious to one of ordinary skill in the art at the time of the invention to have used a customer tracking means in the system taught in Bondarenko et al/Brown et al/Pickering et al in light of the teachings of Martz et al in order to provide a means for distinguishing the caller information in the queues.

8. Claims 15 – 16 are objected to as being dependent upon a rejected base claim.

but would be allowable if rewritten in independent form to include the limitations of the

base claim and any intervening claims.

9. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Steven Blount whose telephone number is 571 - 272 -
